

# Preventive Blood Purification Therapy (DFPP)

To Timeless Longevity: A Proactive Approach to the 100-Year Life Era.

---

# Longevity Medicine / Apheresis therapy

## What Is Blood Purification Therapy?

Blood purification therapy involves circulating blood through specialized medical devices to selectively remove substances associated with:

- Chronic inflammation
- Oxidative stress
- Metabolic imbalance

The therapy is conducted in a controlled clinical setting and is widely used in Japan as part of preventive and longevity-focused care.

## Why Blood Quality Matters for Longevity

Modern longevity research increasingly highlights the role of:

- Persistent low-grade inflammation
- Reduced circulation efficiency
- Accumulated metabolic byproducts

Blood purification therapy addresses these factors directly by improving the internal biochemical environment.

## Commonly Reported Benefits

- Improved circulation and oxygen delivery
- Enhanced mental clarity and focus
- Reduction in persistent fatigue
- Support for cardiovascular and metabolic health

For many clients, this therapy functions as periodic internal maintenance, comparable to preventative servicing of high-performance assets.

## Commonly Reported Benefits

- Improved circulation and oxygen delivery
- Enhanced mental clarity and focus
- Reduction in persistent fatigue
- Support for cardiovascular and metabolic health

## Conventional Care (Indirect Maintenance)

Diet Improvement

Exercise

Medication

## The New Option: DFPP (Direct Removal)

# Blood Purification Therapy

A direct removal system. It physically filters cholesterol from the blood itself, rather than just suppressing its production.

---

# Personal Well-being in the 100-Year Life Era

We provide advanced medical services for international visitors, focusing not just on curing disease, but on mitigating “future risk” to optimize healthy longevity.

# Returning a Muddy River to a Clear Stream

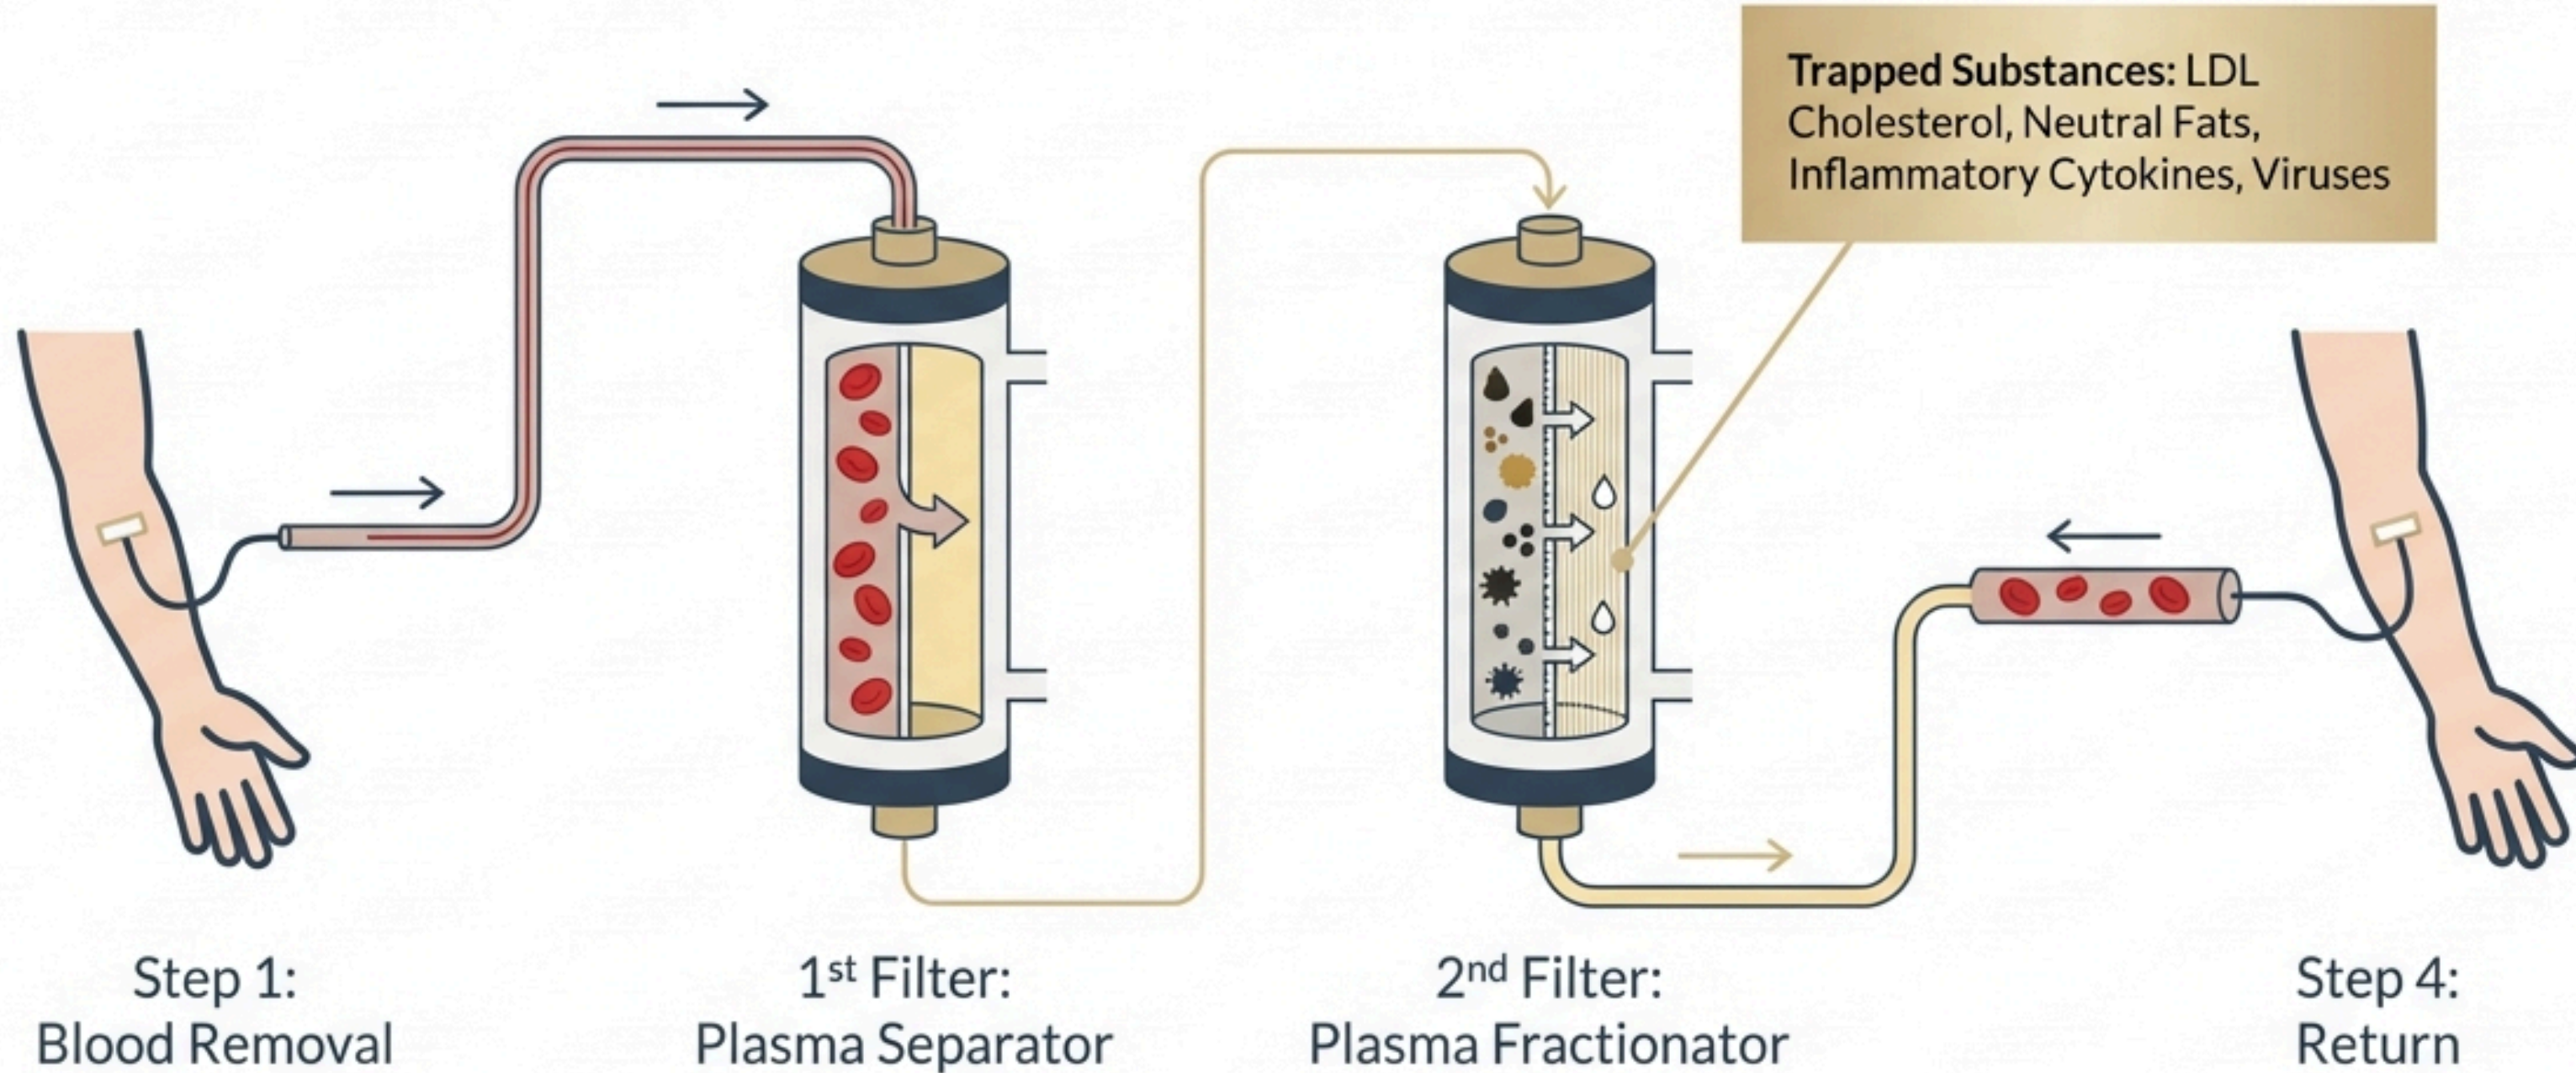

What is Double Filtration Plasmapheresis (DFPP)?

---

- **Concept:** Just as a high-performance filter cleans a river, this therapy passes your blood through a membrane to separate and remove pathogenic substances.
  - **Primary Goal:** To prevent and improve “vascular aging”—the root cause of serious diseases and bedridden states.
  - **Target:** Direct removal of sludge that diet and exercise cannot reach.
-

# The Double Filtration Mechanism

# Visualizing the Burden Your Vessels Were Carrying

---

**BEFORE**

**AFTER**

Neutral fats and cholesterol that were stuck in the filter.  
This waste was circulating in your body moments ago.

# Treatment Process

Our facility prioritizes safe and secure treatment above all else. For each patient, in addition to doctors and nurses, a dedicated clinical engineer will be assigned to provide care. Furthermore, to ensure patient privacy, treatments are conducted in private rooms, allowing you to receive care in a relaxed environment where you can enjoy activities like watching movies.

# Immediate Quantifiable Results

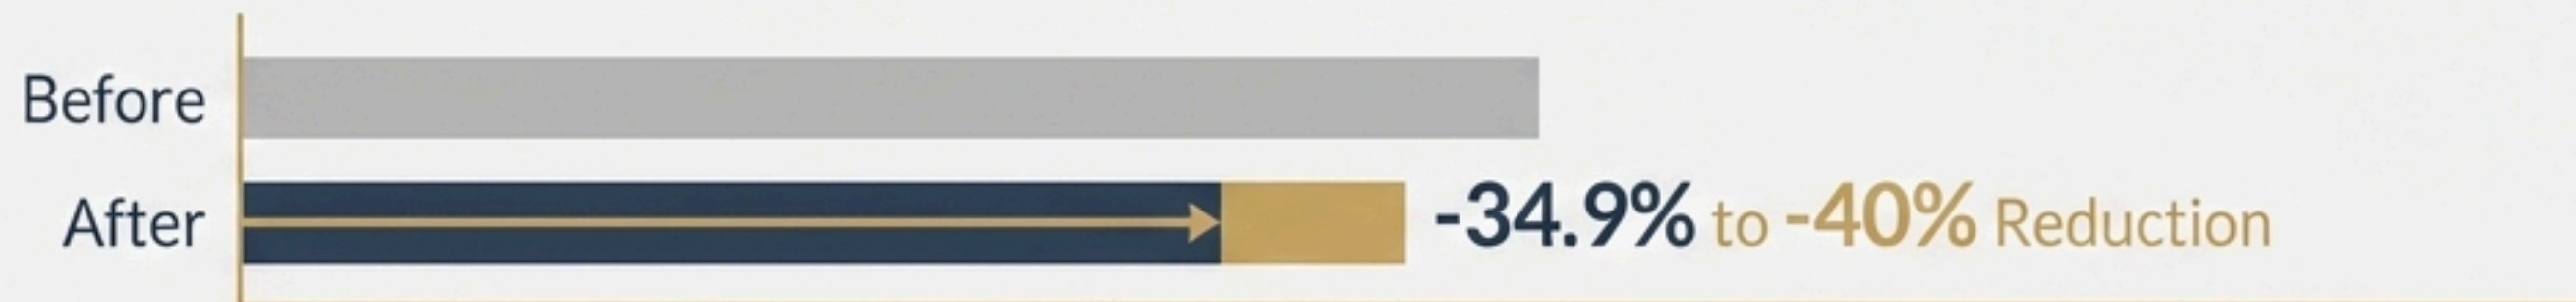

## Neutral Fats (Triglycerides)

## High-sensitivity CRP (Inflammation)

## LDL (Bad) Cholesterol

Significant reduction in cardiovascular risk factors achieved in a single 3-4 hour session.

# Targeting Hidden Inflammation

## High-Sensitivity CRP

---

### What is it?

A marker indicating the intensity of “hidden inflammation” occurring deep inside the body.

---

### Why it matters?

Atherosclerosis is fundamentally an inflammatory condition. By removing inflammatory cytokines, DFPP attacks the root cause of vascular aging, not just the symptoms.

---

### Result:

**Average 43.8% reduction in inflammation markers.**

# Beyond the Numbers: The Felt Experience

“Vision became clear; felt like my field of view opened up.”

“Stiff shoulders improved and my body felt lighter.”

“Improvement in cold sensitivity; fingertips felt warm.”

“Skin tone improved.”

---

**Mechanism:** Improved microcirculation allows oxygenated blood to reach extremities and capillaries more effectively.

---

# Who Should Consider DFPP?

Individuals concerned about vascular aging.

Those seeking active prevention against stroke and myocardial infarction.

Patients treated for dyslipidemia or diabetes who are not seeing sufficient results from medication alone.

Individuals with high viscosity blood looking for a “biological reset”.

---

# The Treatment Process

## Counseling

Medical interview with a doctor.

## Screening

Blood test to ensure eligibility.

## Treatment

3 to 4 hours in a private room.

## Results

Explanation of removed substances and data analysis.

Recommended frequency: Once every 3-4 months, or as a single annual "reset".

# Aftercare Guidelines

## Hydration

Drink plenty of water to replenish blood volume.

## Rest

Avoid intense exercise like running on the day of treatment.

## No Alcohol

Avoid for 2 hours post-treatment; intoxication occurs easily.

## Injection Site

Do not rub the site; avoid lifting heavy objects.

# Frequently Asked Questions

---

## Is it painful?

Minimally. Similar to a standard blood draw. Once the line is secured, there is generally no pain during the 3-hour cycle.

## Are there side effects?

Serious side effects are extremely rare (1,600+ case track record).

Minor internal bleeding (bruising) at the needle site may occur.

## Is the filter safe?

We use biocompatible materials with high safety profiles to minimize immune reactions.

## SPECIAL ARRANGEMENTS ARE ALSO AVAILABLE UPON REQUEST

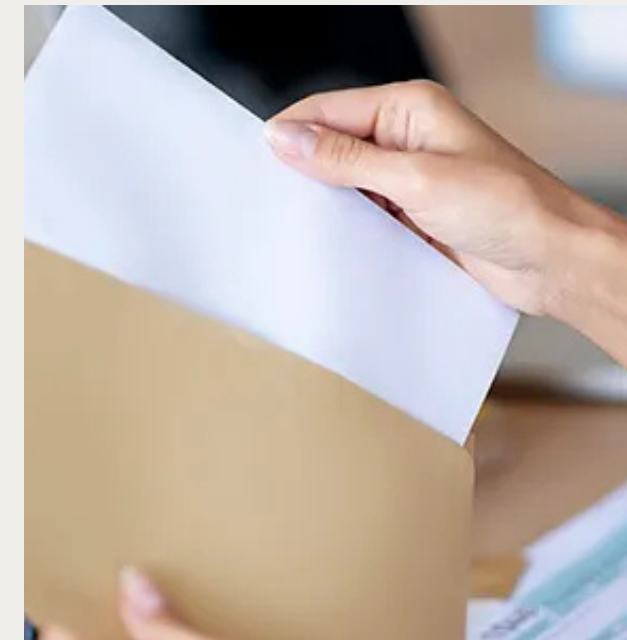

For guests seeking high-precision health screening, we can flexibly arrange private transportation, refined sightseeing experiences, and exclusive dining options according to your preferences.

Please feel free to contact us to discuss your requirements—we would be delighted to assist in creating a seamless and elevated experience in Japan.

After the examination, a physician provides a clear and personalized consultation on the results.

**APHERESIS  
THERAPY**      **¥1.100.000**

A comprehensive written report of all examination results will be provided approximately three weeks after the screening.

Should any concerns arise, a comprehensive follow-up care system ensures seamless and discreet support for complete peace of mind.

**Additional high-precision health screening programs are also available.  
Please feel free to contact us for further details.**
